

# SINA supported Whiteboard

## The supplement for secure interactive meetings

The SINA compatible whiteboard offers many possibilities for interactive collaboration. German national RESTRICTED (VS-NfD) compliant workshops, conferences, meetings or training sessions can be fully digitized.

### Optimal use of collaboration tools

Starting in 2024, the digital whiteboard will expand the SINA product portfolio to include an interaction and work medium for the meeting room. The whiteboard is a large, touch-enabled screen. It offers plenty of space and countless display options. Collaboration tools can be used optimally on the whiteboard, for example, to create large-scale mind maps. Whether on-site or working remotely, employees can collaborate on ideas and concepts and visualize them in a variety of ways. Depending on the collaboration software<sup>1</sup> used, remote editing on the whiteboard is also possible in real time.

### Always VS-NfD compliant

Using the whiteboard is as simple as can be: SINA Workstation S<sup>2</sup> or SINA Mobile S are connected directly via USB-C cable. Thanks to plug-and-play, the whiteboard is immediately ready for use. The paired SINA device ensures security as usual VS-NfD compliant.

The interaction and compatibility with SINA products is tested and constantly updated. Users can access all web applications on the

SINA network at all times. Unlike other whiteboards on the market, the SINA supported Whiteboard does not use a potentially insecure “smart” operating system that is unsuitable for use with classified information.

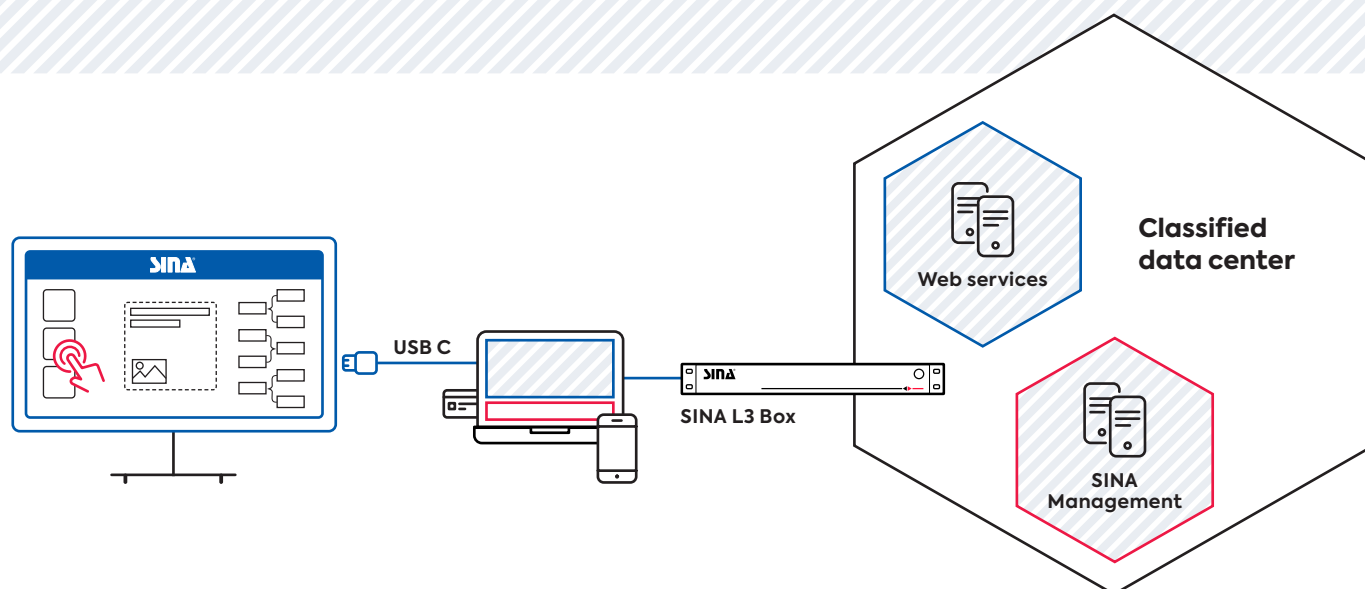

The whiteboard has no network interfaces and does not store any personal data, which means it can safely be placed in publicly accessible meeting rooms without compromising security.

### Benefits

- Compliant with German national RESTRICTED (VS-NfD)
  - No personal user data directly on the whiteboard
  - No network interfaces installed
  - Connected SINA devices implement requirements for classified information
- Always SINA compatible
- Optimal use of collaboration tools possible
- Excellent video and sound quality

<sup>1</sup> For security reasons, no collaboration software is preinstalled on the whiteboard.

<sup>2</sup> Only with touch-enabled SINA Workstation S (Lenovo Yoga devices), support with all SINA Workstation S devices in planning.

## Optimally equipped

The SINA supported Whiteboard comes as a complete bundle with essential components. Its external camera auto-focuses on the person currently speaking in the room, ensuring optimal image transmission. Additionally, it includes an integrated soundbar that provides excellent sound quality. A swivel arm with storage surface allows input devices to be conveniently moved in or out of the way.

The whiteboard is suitable for nearly all types of meeting rooms. It has an optional mounting bracket with a rolling base. The whiteboard can thus be easily moved around the room or moved to another meeting room altogether.

With the SINA supported Whiteboard, achieving a full digitalization of training sessions, meetings, and other group events has never been more convenient.

## Further product information

- Available in two sizes: 65" and 86"
- Multi-touch screen
- External camera<sup>3</sup>
- Automatic focusing of speakers
- Integrated soundbar
- Swivel arm with storage shelf
- Wheeled foot

<sup>3</sup> Use of integrated cell phone camera with SINA Mobile S. Support for external camera in planning.
